

## Driving dynamics newly defined: the Audi A6 e-tron and Audi S6 e-tron

**Ingolstadt, December 3, 2024 – When it comes to driving dynamics and ride quality, the Audi A6 e-tron is setting new standards in its class.**

Specifically developed for the Premium Platform Electric (PPE), the front axle plays a major role in the A6 e-tron driving dynamics and makes the vehicle extremely agile. The optional adaptive air suspension with electronically controlled damping enables the vehicle to offer outstanding ride comfort and sporty handling at the same time. The Audi drive select efficiency mode is a special feature. In this mode, the suspension lowers the body by up to 20 millimeters (0.79 in) depending on the vehicle's speed, thereby further improving aerodynamics. This can also be seen in the model family's impressive ranges: the Audi A6 Sportback e-tron\* stands for high suitability for everyday use and, with a range of 756 kilometers (469.8 mi), is the range champion in its segment.

Detailed information on the driving dynamics can be found in the [BasicInfo](#) for the A6 e-tron.
